EQUALIZATION METHOD

(Determining the best seconds and thirds for progression to finals)

The overall positioning or ranking of teams and the determining of the Pool winner at the end of the round robin for Progression (to the Finals Series, Final 16 and or quarter finals etc) is as per the **Conditions of Play 6.4**

In determining ranking across multiple Pools to enable Finals progression, issues arise when within any division, there exist Pools with varying team numbers. (e.g. 6, 7 or 8 teams) This then means that teams have not played the same number of round robin games, making comparison across Pools more difficult. To make for a fairer comparison, the number of games played shall be equalized. Therefore, determination shall be based on a Pool of 7 or 6 round robin games. Pools of 8 teams shall have the game against the lowest ranked team at the end of the round robin removed (to make 7 teams) from calculations of Game Points, Differential and Percentages as per below. In the rare case that there are only 6 teams in a Pool, all teams shall have the game vs the lowest ranked team at the end of the round robin added to calculations (i.e. twice or to make up the six games required).

Once equalization has occurred and teams are to be ranked, the following procedure is applied -

1. Game Points accrued
2. Differential (for minus against)
3. Percentage (for divided by against x 100)
4. Drop off if all else equal
